***Claim Rejections - 35 USC § 103***

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Pat. 6216360 (US'360) in view of U.S. Pat. 6417498 (US'498).

Referring to Figs. 1 and 2, and col. 2, lines 10-57, US'360 discloses the invention substantially as claimed, including "beveled containment reservoir holes mating with an o-ring" (el'ts 13, 14), and a stirrer (16, 17), with a protective cage (15). The claim differs from US'360 only in calling for heating of the plurality of liquid containing vessels by means of heat transfer fluid rather than the IR heater disclosed by US'360. However, US'498 shows the heating of a plurality of liquid containing vessels by means of heat transfer fluid. It would have been obvious to adapt the fluid heating means of US'498 to the device of US'360 to enhance the uniformity of heating. The Examiner notes that the utilization of a fluid heating medium would necessitate resting the beakers (2 )of US'360 on the floor of the containment chamber, which placement would be immediately obvious since the magnetic stirring means of US'360 requires magnetically permeable material between the driving magnet and stirrer.

***Allowable Subject Matter***
